

Figure 4: Validation AUC of linear classifier on classifying delimiter tokens before the true rejection and false acceptance paragraphs.

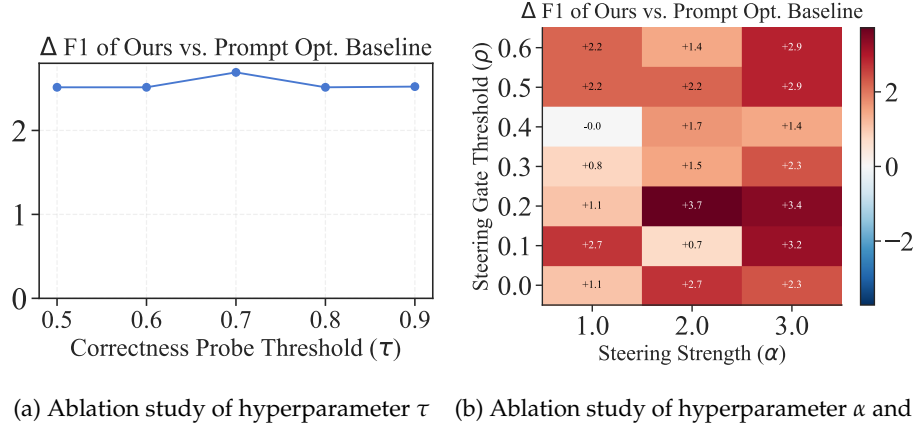

Figure 5: **Ablation study of steering hyperparameters.** (a) F1 improvement of VerifySteer-Uni over the prompt optimization baseline when varying the sample-level correctness probe threshold τ , which determines the steering direction. (b) F1 improvement of VerifySteer-Uni over the prompt optimization baseline when varying the steering strength α and delimiter-level gate threshold ρ . All results use Qwen3-8B on the GSM8K subset of ProcessBench.
